Coding Test Question

Time allowed: 1:30 Hours

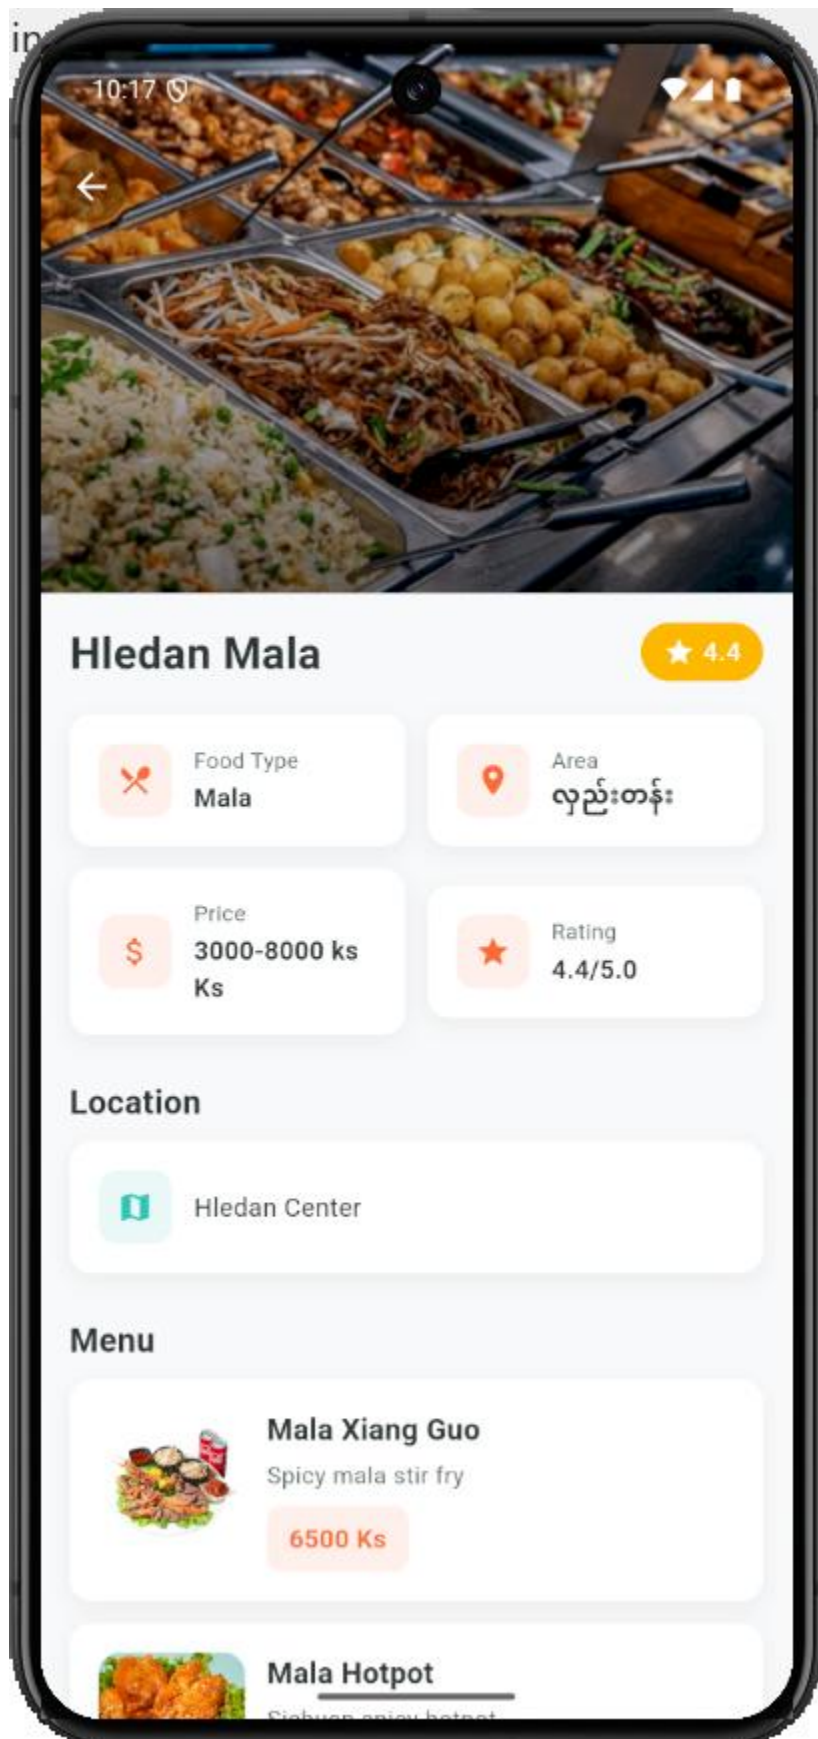

Home Screen Ui

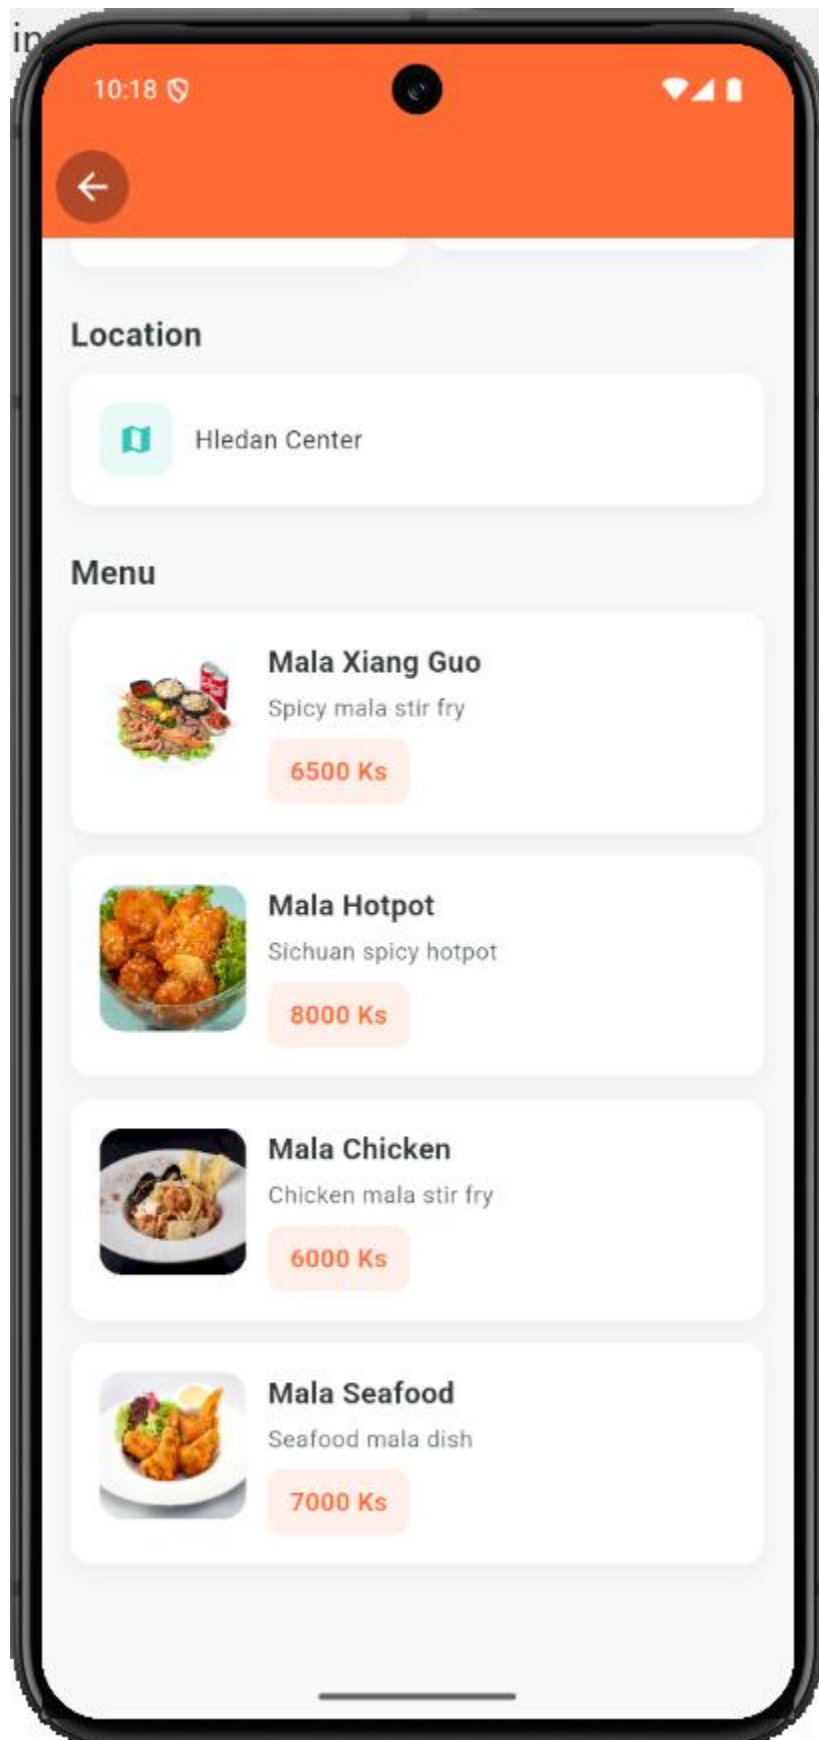

Shop List Ui

Shop Detail Ui

Shop Menu Ui

Requirements:

1. App Structure & Theme

1. Use a Scaffold for the basic app layout.
2. Include an AppBar for navigation.
3. Apply a consistent AppTheme for the app, including colors and styling for the AppBar.

2. Layout & Widgets

1. Use Column and Row to organize UI elements.
2. Display a list of shops using GridView or GridView.builder.
3. Display each shop's menu items using ListView or ListView.builder.
4. Use Card custom widgets to display shops and menu items with a clean, modern design.

3. State Management & API Integration

1. Use Flutter State (setState) to manage and update the UI dynamically.
2. Fetch data from a REST API using the http Flutter package.
3. Parse JSON data from the API and display it in the app.

4. Images

1. Display shop and menu images using the cached_network_image package for performance and caching.

5. Extra Requirements

1. Implement error handling for API calls.
2. Show a loading indicator while fetching data.
3. Make the UI responsive for different screen sizes.
