

YHA Computer Training Center

PHP Coding Challenge Exam

Question 1.

Create a Vehicle class with properties color and speed.

Create move() function inside that vehicle class which echo “The vehicle is moving”.

Requirements

- Create two subclasses, Car and Motorcycle, that inherit from Vehicle class.
- Implement(rewrite) a move() method in each class(Car & Motorcycle) to print a specific message.
- For Car subclass, echo(‘The car is driving’).
- For Motorcycle subclass, echo(‘The motorcycle is riding’).

Question 2.

Create a Register form using HTML and Bootstrap and PHP.

These inputs will be included

- Username
- Gmail
- Password
- Confirm Password

Requirements

- Validate the data before registration the account,
- Username must be at least 2 characters(Letter), if not -> alert the error
- Email must be included @ symbol, if not -> alert the error
- Password must be included at least one capital letter, if not -> alert the error
- Password and Confirm Password must be equal, if not -> alert the error

The Ui output result will be

Registration Form

Name

Email address

Password

Confirm Password

Question 3.

Create an Array of Student names and score by using multiple array

```
$students = [  
    ["name" => "John Doe", "score" => 85],  
    ["name" => "Jane Smith", "score" => 92],  
    ["name" => "Sam Brown", "score" => 74],  
    ["name" => "Emily White", "score" => 58],  
    ["name" => "Chris Green", "score" => 40],  
];
```

Requirements

- Check the grade depends on students' score, using if statement
 - If score ≥ 80 , "A"
 - If score ≥ 60 , "B"
 - If score ≥ 40 , "C"
 - If score < 40 , "F"
- Then output and display the records on HTML Table elements, using loop statement

The output result will be

Student Grading System

Student Name	Score	Grade
John Doe	85	A
Jane Smith	92	A
Sam Brown	74	B
Emily White	58	C
Chris Green	40	C

Question 4.

Create 3 UI form using HTML, CSS and Bootstrap

1. Home.php
2. Login.php
3. Admin.php

Ui Output of Home.php file will be only navbar, Login button must be included.

Navbar	Home	Features	Pricing	login
--------	------	----------	---------	-------

UI output of login.php.

Login

Username

Enter Username

Email Address

Enter email

Password

Enter password

Submit

UI output of admin.php after login.

Welcome - YHA

Logout

Requirements

- Link login.php file with login button from home page.
- Use SESSION to check
 - If user has not login yet, send to login.php.
 - If user has already login, send to admin.php and show “Welcome – login_username”.
- Define default Email and Password to check user’s email and password is true or false
 - If email and password is incorrect, alert(“Your Account record is not found”).
 - If email and password is correct, send to admin.php and store username inside session.
